

Find the gaps a reviewer would. Before they do.

DEISO Kensa Pro checks your EPD or LCA study the way a reviewer does, before verification or critical review. Every finding shows the requirement, where the study falls short and the points to gain.

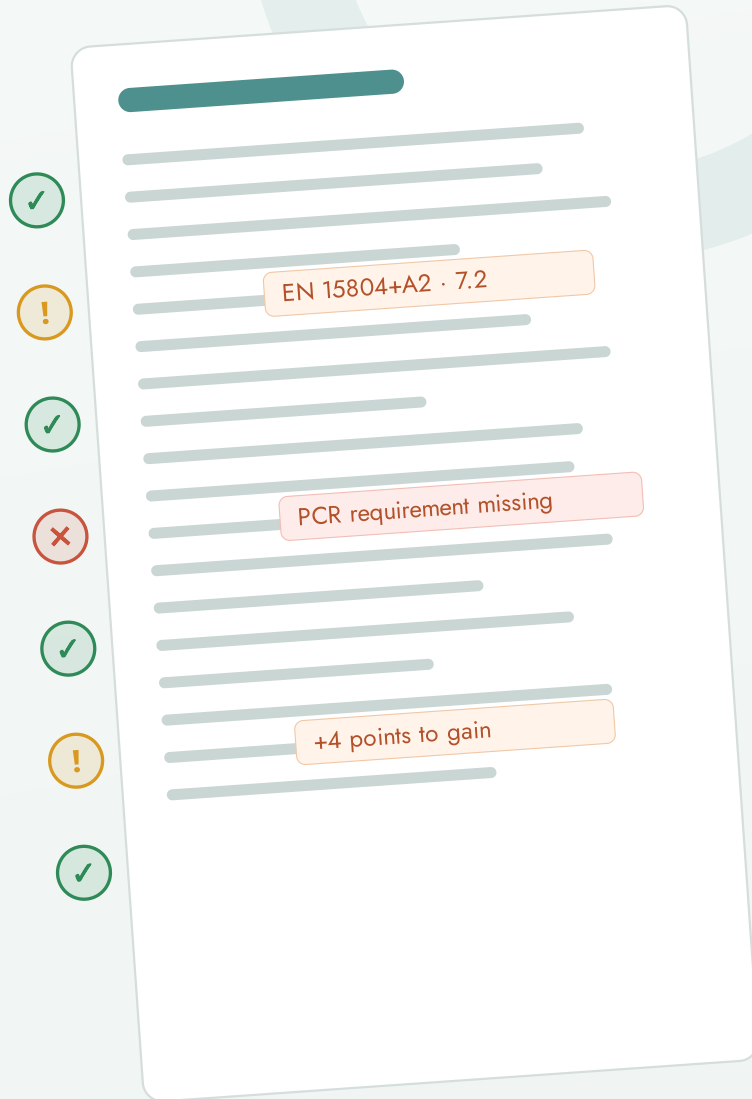

ISO 14025 · EN 15804+A2 · your PCR

ISO 14040 · ISO 14044

A score you can explain

Methods in the open

Verification and critical review are the most expensive place to find a gap.

An EPD or LCA study that goes back and forth with a verifier costs weeks and fees. Most findings are predictable, if someone checks the study against the standards and the PCR first.

What slows teams down

-  **Findings arrive late**
Gaps surface at verification, when every round of changes costs time and money.
-  **Unclear requirements**
ISO 14025, EN 15804+A2, the PCR, ISO 14040 and 14044: hard to check line by line.
-  **No sense of readiness**
Teams cannot tell how close a study is to passing before they submit it.

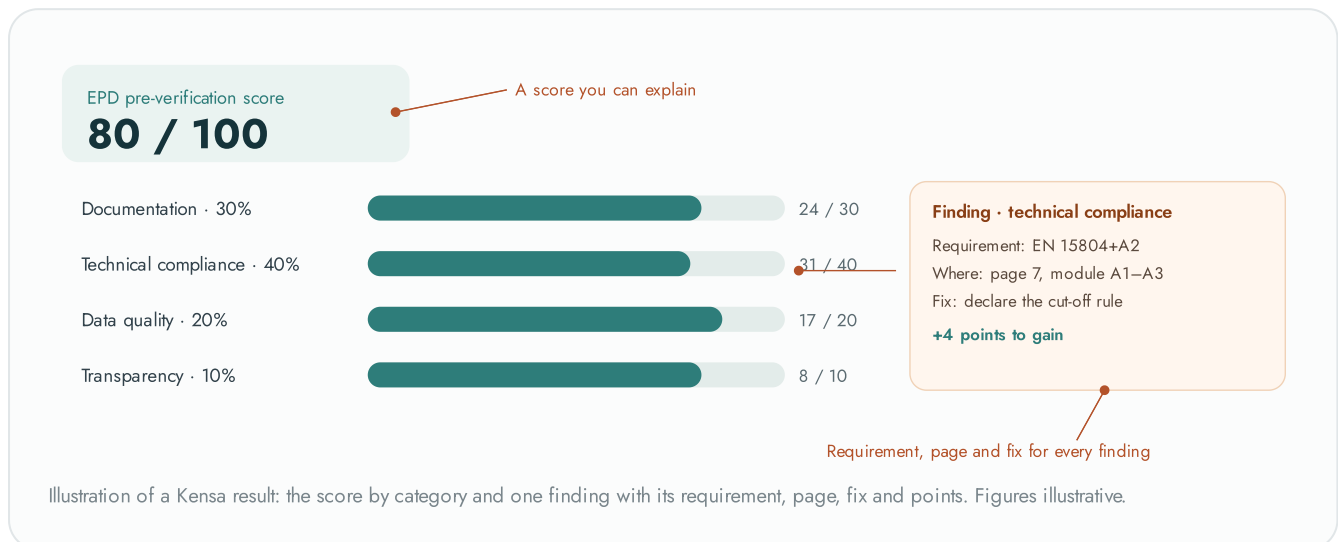

What changes with DEISO Kensa Pro

-  **Checked the way a reviewer checks**
EPDs against ISO 14025, EN 15804+A2 and your PCR; LCA studies against ISO 14040 and 14044.
-  **Findings you can act on**
Each one with the requirement, the page and the fix, and the points it is worth.
-  **A score you can explain**
Every score breaks down into categories, sub-factors and the points to gain.

Kensa prepares a study for independent verification or critical review. It does not replace either, and it says so on every result.

How DEISO Kensa Pro works

From your study to a list of fixes, before submission.

EPD pre-verification

Checks an EPD against ISO 14025, EN 15804+A2 and your PCR.

LCA pre-publication check

Checks an LCA study against ISO 14040 and ISO 14044.

Score you can explain

Every score breaks down into categories, sub-factors and the points to gain.

Methods in the open

Read exactly how each check runs, and take the method away as a PDF.

Ask AI

Questions about your study and its findings, on your own OpenAI account.

Your standards, kept private

Licensed copies you add are stored encrypted on your PC and never synced.

Clear about what it does, and what it does not.

Scope of the method

- Pre-verification only: it prepares a study for verification or critical review and does not replace either
- Results are not a verification, certification or approval
- Kensa ships no standard text: requirements are summarised in DEISO's own words with clause numbers
- Standards are named without year or edition, as in the app

Before you install

- Windows, 64-bit; nothing else to install
- An OpenAI API key with billing: checks and Ask AI run on your own OpenAI account
- A licence key from DEISO; a 7-day trial runs 3 checks a day
- Your EPD or LCA study as a document

Plans, per year

Pro	1 computer	USD 1,490
Team	3 computers	USD 3,790
Enterprise	4 or more computers	Quotation

Every paid plan includes every feature. Prices in US dollars.

Start with a trial. Prove it on one case. Scale.

7-day trial

Three checks a day on your own studies.
